SOUTH DEVON
BEESTELERSGENOOTSKAP VAN S.A. • CATTLE BREEDERS' SOCIETY OF S.A.

Posbus/P.O. Box 9777 | Bloemfontein 9300 | TEL. 051 410 0950
E-mail: sdevon@studbook.co.za | Website: www.southdevon.co.za

Van die | From the President *Tielman Nieuwoudt*

Skaars 'n jaar gelede het ek ook 'n boodskap vir die Nuusbrief geskryf en sedertdien het baie water in die see geloop. 2009 was 'n besige en in baie opsigte 'n positiewe jaar gewees.

'n Baie geslaagde AJV te Kimberley, rekord bulpryse, hoë speenkalfpryse, groei in ledetal en koeigetalle, positiewe finansiële state en 'n suksesvolle verskoppingswedstryd het alles daartoe bygedra. Die vooruitsigte op landbougebied vir die tweede helfte van die jaar lyk ook belowend. Die Oos-Kaap wat erg deur droogte geteister was, het in groot dele reeds goeie lente reëns ontvang en glo ons dat dit gedurende die somermaande sal volhou.

Die Genootskap het ongelukkig die dienste van Liezel van Heerden by die Sekretariaat verloor. Liezel is gedurende Oktober met Thys Grobler getroud en is nou in Middelburg in Mpumalanga woonagtig. Baie dankie vir jou goeie werk en wens die Genootskap jou net die beste toe vir die toekoms.

Waar ons dan ook die Kersseisoen vinnig nader is, is dit my wens dat u as South Devon telers en ondersteuners, 'n vreugdevolle Kersgety sal hê en die liefde van Christus sal ervaar.

Alle voorspoed en seën vir 2010 word South Devon telers en hul gesinne toegewens en mag die South Devons gedurende 2010 nog mylpale bereik.

Barely a year ago I found myself writing the message for the newsletter and since then plenty has happened. 2009 has been a busy year and in many aspects a very positive one.

A well attended AGM held in Kimberley, a record price obtained for a South Devon bull, high weaner prices, an increase in our membership as well as an increase in the number of stud animals, positive financial results and a successful heifer project all helped to make the year one to be remembered.

The agricultural prospects for the second half of the year seem promising. Parts of the Eastern Cape that were experiencing severe drought have had good, soaking spring rains, which hopefully will continue during the summer months.

Unfortunately the Breed Society has lost the services of Liezel van Heerden who married Thys Grobler during October. Liezel now lives in Middelburg, Mpumalanga. The Society would like to take this opportunity to thank Liezel for her services over the past few months and wish her all the best for the future.

As the Festive season fast approaches, I would like to wish both supporters and breeders a Blessed Christmas and a prosperous 2010. May you all experience the love of Christ during this time.

May 2010 be the year the Society reaches many new milestones.

SOUTH DEVON MENSE

Liesel en Matthys op hul trouwdag

Liesel van Heerden, die South Devons se sekretaresse van die afgelope jaar, is op die 10^{de} Oktober 2009 met Matthys Grobler getroud!

Liesel en Matthys het na Middelburg in Mpumalanga verhuis. Matthys werk vir Cipla Agrimed, terwyl Liesel nog huisvrou is.

Ons beste wense van almal by die South Devons vergesel julle!

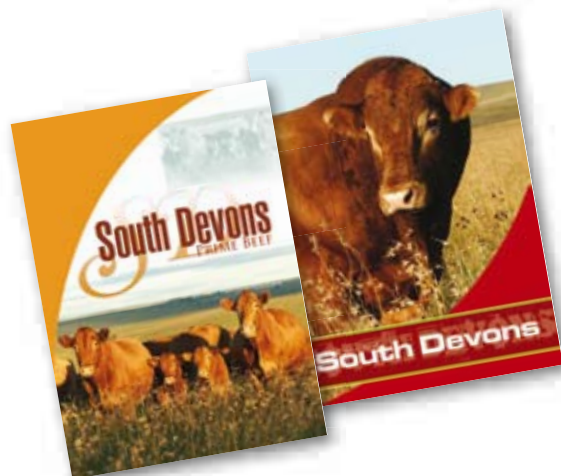

Barrie jnr is op 32 weke (2 mde te vroeg) met 'n noodkeiser in die Bloemfontein Medi Clinic Hospitaal gebore. Hy het 2.8kg geweeg. Hy was vir 31 dae in die intensiewe sorg eenheid vir babas, waarvan hy vir 10 dae in isolasie was en geveg het vir sy lewe teen breinvliesontsteking. Terug in Kimberley was hy weer opgeneem vir 6 dae omdat hy gesukkel het om gewig op te tel. So min soos 30g 'n dag was vir hom onmoontlik. Gedurende hierdie tyd besef 'n mens die almag van die Groot Skepper. Gebede, sms'e, oproepe en ondersteuning van vriende en familie het ons deurgetrek en vandag is Barrie jnr 'n volle 3 maande oud. Hy weeg tans 3.5kg en raak by die dag ouliker. Sy pa sê hy gaan een van die dae kan saam boer. Baie dankie vir almal wat ons op die hande gedra het in hierdie moeilike stadium van ons lewens.

- Barrie & Martha van Zyl, Kimberley

DEKLYSTE

Ons herinner u vriendelik om u deklyste vir die komende dekseisoen so gou moontlik aan Hanley Fourie by SA Stamboek te voorsien. Indien 'n deklyste van die huidige dekseisoen ontbreek sal nuwe geboortes van kalwers nie geprosesseer kan word nie.

Joernaal 2010

- Foto's asb!

Die South Devon Telersgenootskap beoog om 'n nuwe Joernaal gedurende 2010 uit te gee. Ons benodig egter nuwe kwaliteit foto's van South Devon beeste. Dit het lekker gereën in groot dele van ons land en die beeste is mooi, so sit die kamera in die bakke en neem asb baie foto's. Ons begin teen Maart 2010 om die Joernaal saam te stel.

2010 AGM

hosted by **Winston South Devons**

○ ● 9th & 10th MARCH 2010 ● ○

Tuesday 9th March

Council Meeting in the morning

LUNCH

AGM to be held in the afternoon

Supper at WINSTON

Wednesday 10th March - South Devon Open Day for commercial breeders

John will have cattle close to the house that can be viewed.

10:00 Registration & Tea

10:45 Lecture on TRACE ELEMENTS by Gavin Mitchell from VIRBAC

11:30 Lecture on NUTRITION by Vlok Ferreria from MOLATEK

12:15 Lecture on "How to use BLUP when selecting Bulls" by Bernard Burger & Dan Kriek

13:00 LUNCH & REFRESHMENTS

All commercial breeders are most welcome to attend. More information will be made available at a later stage.

THRICHOMONAS

positief! wat nou?

In die vorige uitgawe het ek geskryf oor hoe Trichomonas in 'n kudde inkom - Dit het nou gebeur - wat doen jy nou?

BULLE WAT POSITIEF IS:

Bulle onder 4 jaar kry ons gesond met 'n 7 dae behandeling wat antibiotika spuite, skedespoelings en maagbuis doserings insluit. Die koste beloop R3 500/bul. Ouer bulle word meestal geslag, behalwe as dit 'n baie duur bul is. Daar is geen entstof vir bulle beskikbaar nie. Die behandelde bul word dan na 2 maande weer 3 keer getoets voor hy gebruik kan word.

In 'n kudde waar positiewe bulle is, **moet** bulle 3 keer getoets word voordat 'n bul as negatief beskou kan word. Elke toets is net 70% akkuraat.

KOEIE:

Doen dragtigheidsondersoeke - alle koeie of verse wat nie dragtig is nie word beskou as positief en moontlike draers van Trichomonas. Merk hierdie koeie met oor-

plaatjies en ent hulle 2 keer met 'n 2-4 weke tussenpose met Trichguard.

Hierdie entstof help dat 'n groter persentasie diere se baarmoeders genees word van Trichomonas en die konsepsie is dus hoër. **Geen waarborg** bestaan dat koeie na 3 of 6 maande se rus gesond is nie. Slegs 1 koei moet positief bly en jou nuwe bul word weer besmet.

Doen dus een van die volgende met dié koeie:

1. Ent koeie twee keer en sit dan by 'n bul of bulle waarvoor jy nie jammer is nie bv. ou bulle of jong goedkoop bulle wat geslag kan word na die dekseisoen. Trichguard kostes beloop R85.00 vir 2 entings.
2. Kl die koeie en sit daarna by bulle soos by punt 1 genoem (entstof opsioneel)
3. As min koeie besmet is, laat slag hulle (**moet nie aan**

jou buurman verkoop of op 'n veiling as teeldiere aanbied nie)

Dit is belangrik om bogenoemde koeie vêr van jou bulle en teeltroppe te hou om te voorkom dat hul aansteek, dus kan u verstaan dat dit 'n baie moeilike bestuursprobleem tot gevolg het.

VIBRIOSE (NOG 'N GESLAGSIEKTE):

Alles is dieselfde soos Trichomonas, met dié groot voordeel dat ons 'n entstof het. Ent koeie en bulle 4 weke voor dekseisoen met Vibrin (koste beloop R 11.40 /kop).

Almal behoort dit te doen.

ABORSIES:

Die meeste koeie en verse begin eersdaags te kalf. Elke jaar hierdie tyd kry ons aborsies.

Die eerste siekte waaraan jy moet dink is Brusselose (Besmetlike Misgeboorte of BM). Koeie wat geabborsteer het moet dadelik uit die trop verwyder word en ons moet bloedmonsters neem. Hou hulle dan apart tot die uitslag bekend is om aansteek te beperk.

Indien die kalfie beskikbaar is en nog baie vars is, kan u dit na u veearts neem sodat dit vir verdere siekte bepalinge weggestuur kan word. Hanteer die kalf met handskoene, sit in 'n plastieksak, hou koel en bring so gou moontlik na u veearts. BM is hoogs aansteeklik vir die mens.

Op die kalfie kan ander siektes bepaal word soos bv. BVD, Clamydia, Leptospirose ens. **Slegs op sowat 40% van aborsie gevalle kry ons 'n oorsaak, die ander 60% bly onbekend.**

- Ander oorsake is bv. erge stres soos koue, hitte, dors, honger en vervoer;
- Beserings - bv. vervoer;
- Hormonale afwykings - moeilik bepaalbaar;
- Erge tekorte bv. spoorelemente;
- Swamme - soms baie belangrik bv. gemufde hooi, grane of kuilvoer;
- Verkeerde gebruik van medisyne bv. Kortisoon (Prednisoloon of Predef); of
- Prostaglandien bv. Estrumate of Lutalyse.

VOORKOMING:

Voorkom resorpsies - d.w.s. kalfies verloor vanaf dag 1 tot 3 maande na dek - onthou geen hantering of enting vanaf dek tot 2 maande daarna nie.

- Aborsies
- Ent verse teen BM met **RB51**
 - Ent koeie teen **BVD**
 - Laat kudde toets vir **BM**

Groete
Dr Dries Lessing

NATIONAL BEEF RECORDING and improvement scheme

Leslie Bergh, ARC-Animal Production Institute

What is Performance Testing?

Performance testing is a breeding, selection and management tool for more profitable beef production.

The saying “**To measure is to know**” is true more than ever before for beef cattle farming.

What is the objective of the National Beef Recording and Improvement Scheme?

- To supply beef cattle farmers with objective performance information and breeding values to identify and select the best performing animals;
- To supply beef cattle farmers with value adding management information to improve management practices; and
- To use this information to improve the biological and economic efficiency of beef production.

What does the Scheme entail?

The Scheme covers all phases of the production process, namely:

Reproduction Phase (Phase A1):

Reproduction and ease of calving traits of cows and bulls are evaluated by means of mating and calving data. Except for the recording of calving/birth information, provi-

sion is also made for the recording of mating, AI, pregnancy diagnoses, etc.

Suckling Phase (Phase A2)

Mothering ability and efficiency of the cows, and the pre-weaning growth rate of their calves, is evaluated by means of the cow weights and pre-weaning and weaning weights of their calves.

Post Weaning Phases:

On-Farm Recordings (Phase B)

Post weaning growth rate of young heifers, bulls and oxen is evaluated under normal farming conditions by means of their weights at 12 and 18 months age.

Central Performance Tests (Phase C) (optional)

Post weaning growth rate and feed conversion ratio of young bulls (and heifers in Phase C3) are evaluated by means of performance tests under standardised conditions (excluding Phase C3) at central bull testing centres where animals are fed individually.

On-Farm Performance Tests (Phase D) (optional)

Post weaning growth rate of young bulls is evaluated by means of performance tests under controlled conditions on the farm of a member or a private organisation.

In the post weaning phases, the Scheme also makes provision for the recording of:

- Body measurements (shoulder height, body length and scrotum circumference);
- Real time ultrasound (RTU) scanning for evaluation of certain carcass and meat quality traits;
- Tick counts - for evaluating tick resistance - in extensive Phase D tests;
- Linear scoring of functional traits; and
- Pelvic measurements.

Who may participate in the Scheme?

All stud breeders and commercial producers of beef and dual-purpose cattle may participate in the Scheme. All that is needed is a reliable cattle scale and basic handling facilities. Further more, all animals in the herd must be identified and calves recorded at birth.

Which phases are mandatory?

Participation in at least the Reproduction and the Suckling phases is compulsory. Participation in all the post weaning phases is optional. Although some breeder's societies constitutionally enforce their members to participate in the Scheme, the decision on which phases to participate in and which recordings to done within each phase, rest in the hands of the individual farmer.

What is required from me as a participant?

The ARC-Animal Improvement Institute recommends that the following data/weights be recorded where possible:

- Mating lists and AI data (optional)
- Calving data (mandatory)
- Birth weights (optional)
- Weaning weights (mandatory)
- Cow weights at calving and weaning of calves (optional)
- 12 and/or 18 months weights (of all animals not sold, culled or participating in Phases C or D) (optional)

Who runs the Scheme?

The National Beef Recording and Improvement Scheme is managed by the Animal Production Institute (API) of the Agricultural Research Council (ARC), who is responsible for the technical control and supervision of the Scheme.

The ARC-API, with its headquarters at Irene, has field officers at six regional offices rendering services to participants of the Scheme in. There are eleven central bull testing centres (four ARC-owned and seven privately-owned), with a total capacity for testing 5 000+ bulls per annum.

How can I benefit from participating?

- Firstly, data obtained from the Scheme are an objective selection aid for identifying inefficient producers for culling and also for identifying efficient producers for further breeding. This means increased efficiency of production through genetic improvement with very little extra input.

- Increased efficiency of production through genetic improvement means more profit for the enterprise and, eventually, for the entire industry.
- Performance test results provide valuable management information for monitoring management practices and to make changes where necessary.
- Buyers tend to pay more for performance-tested animals and in this regard performance testing serves as a value-added marketing instrument.
- Performance test data and pedigree information are used for estimating breeding values through BLUP technology. Breeding values makes it possible to determine the genetic merit of animals across herds, years, seasons, etc.
- Mixed model technology (like BLUP) has the further advantage that the genetic trends (and environmental trends) of herds and breeds over time can be determined. This information makes it possible to evaluate breeding policies accurately and to make calculated changes where and when needed.
- Providing valuable information and statistics on a national basis to breed societies and producer organizations on performance of different breeds, performance under different conditions, etc.

Why the National Beef Recording and Improvement Scheme?

- The Scheme is run by an independent, impartial organisation, namely the ARC. This gives local and international credibility to the data. Concerning the latter, this is especially important for the export market.
- The ARC-Animal Production Institute is a member of ICAR (International Committee for Animal Recording). Therefore, all data recording, processing and breeding value estimations conform to international rules and standards.
- The collection and processing of all performance test data falls under the same rules and procedures, therefore data are comparable amongst all breeds - an advantage to prospective buyers and the industry in general.
- The Scheme is supported by a large team of researchers and technicians who conduct ongoing research and development to ensure that the Scheme stay in line with international developments and the requirements of the local industry.
- All information and services are backed up by professional animal scientists and technicians who are available to help and advise you on all matters concerning breeding and animal improvement.
- An "ARC-Performance Tested" trademark has been registered and made available to all Scheme members for use in advertisements, auction catalogues, etc., making it easier for buyers to identify herds and animals, which have been ARC-Performance Tested.
- The ARC-Animal Production Institute annually makes awards to excellent performing herds and animals.

What improvement can be expected?

The two most important traits influencing the biological efficiency of a cattle operation are reproduction rate and weaning weight. Reproduction rate in the Scheme is measured primarily by inter-calving period (ICP) and weaning weight by 205-day weight.

In Figures 1 and 2 the trends in average 205-day weight and average ICP of all herds participating in the Scheme are illustrated.

Figure 1: National average 205 day weight of herds participating in the Scheme

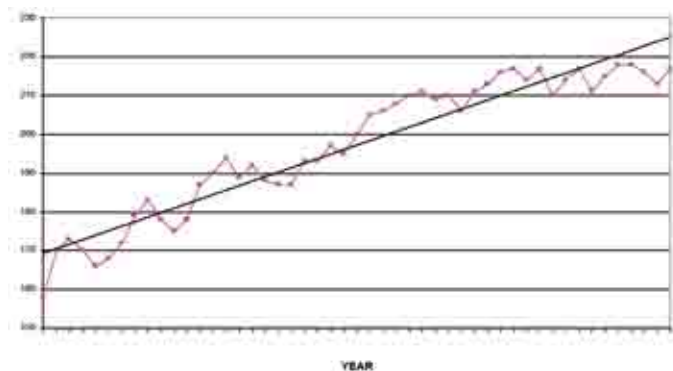

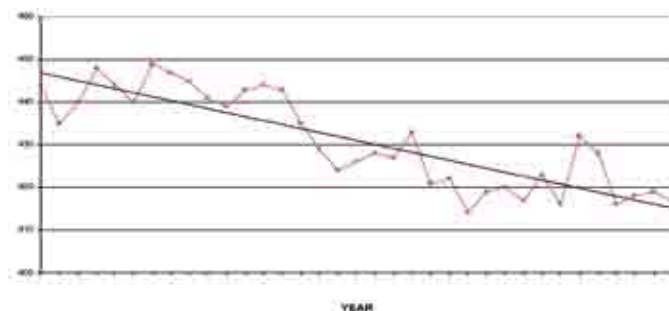

Figure 2: National average intercalving period (ICP) of herds participating in the Scheme

The weaning weight of calves born in 2007 is on average 49kg heavier than calves born in 1960. The average ICP of cows that calved in 2007 is 29 days shorter than cows that calved in 1974.

How do I become a member of the Scheme?

To become a member of the National Beef Recording and Improvement Scheme, contact a Field Officer at your nearest regional office of the ARC-Animal Production Institute:

JOHSTEP SOUTH DEVONS op Boshof

Op Saterdag 22 Augustus 2009 is daar op Boshof in die Vrystaat 'n vleisfees deur die Boshof-Oos Boerevereniging en die Boshof Wildbewaringsvereniging aangebied.

'n Groot verskeidenheid aktiwiteite is aangebied, waaronder 'n uitstalling van verskeie beesrasse wat in die omgewing geteel word.

Johstep South Devons van Giellie en Barrie van Zyl van die plaas Charlottesdal het 2 bulle, 2 verse en 2 koeie na die uitstalling geneem. Ses ander rasse is daar vertoon.

Alhoewel die distrik oorheers word deur veral Bonsmara, Brangus en Simbra, was daar baie belangstelling in die South Devons. Baie ouer boere was aangenaam verras om uit te vind dat die ras nog aktief geteel word.

'n Baie belangrike les wat uit die dag geleer is, is die feit dat boere beslis oortuig kan word van die positiewe bydrae wat South Devons tot hulle kommersiële kudde kan maak. Die gemak van kalwing, aanpasbaarheid, goeie groei en temperament is eienskappe wat baie positief ontvang is.

Wat egter 'n feit is, is dat ons as telers 'n groot taak het ten opsigte van bemerking en die uitbou van die ras. - **Giellie van Zyl**

Vryburg stoetveeveiling

S e p t e m b e r 2 0 0 9

Aduvon Rambo: Koos Geldenhuys (André Kock & Seun Afslaers), Attie du Plessis (verkoper) en Ken Harvey (koper)

Tydens die jaarlikse September veiling is vier South Devon bulle aangebied deur lede van die Noord-Wes South Devon klub. Nieubaden South Devons het drie bulle aangebied en Aduvon South Devons een.

Laasgenoemde bul, **Aduvon Rambo**, is vir 'n nuwe Suid-Afrikaanse rekord prys van R48 000 verkoop. Die kopers was Ken Harvey en sy seun Eddie van Vryburg. Die gemiddelde prys vir die South Devons was R26 000. Net een bul is nie verkoop nie.

Die Noord-Wes klublede kan voorwaar trots wees op die puik prestasie en veilingsuitslag.

MODULE

WIDELY USED

BeefPro is used by hundreds of
commercial and stud beef cattle
farmers in 12 countries on 4
continents

- » Developed in SA by the ARC with a private software house, BenguelaSoft CC
- » Equally suitable for commercial and stud herds
- » User friendly MS Windows operating system
- » Afrikaans, English, Portuguese and Spanish language options
- » Install on more than one computer at no additional cost
- » Use for more than one herd at no additional cost
- » World wide user support, training and marketing via ARC officials and private agents
- » Support SA Studbook, ARC, BreedPlan and NSBA protocol and formats
- » Performance data processing according to ARC's National Beef Recording and Improvement Scheme
- » Various standard and user-defined screens & reports
- » Reports can be viewed, printed and stored electronically in various formats
- » Electronic data sending & importation, including birth notifications, performance data and weights from electronic scales
- » Stock registers for animals in herd, medicines, vaccines, semen and embryos
- » Powerful search, sort and select functions for fast and easy selection of animals
- » Management diary and address list
- » Calculate inbreeding coefficients for possible matings
- » Integrated GenePro breeding management module (optional)
- » Extensive data verification functions
- » Easy updating directly from the internet
- » Continuous user-driven development and upgrading
